[About this page](#)

Who we are

We are a family shop in Sycamore, Illinois, and we have been welding aftermarket front-end loaders since 2015. Our focus is narrow on purpose. We build loaders for the machines the big manufacturers ignore: garden tractors, zero-turn mowers, sub-compacts. If you own an X758 or a BX23S, nobody at the dealership has a good answer for you. We do.

Our catalog is bigger than most people realize. Everyone knows the two loaders. Fewer know we also make a boom pole, a mechanical grapple that needs no third hydraulic circuit, two kinds of ballast, and a build kit for anyone with a welder and a free weekend.

Prices below were current on **8 September 2026**. They change, and our shop page is always the authority.

How this page is organized

Our shop menu splits things three ways: Front-End Loaders and More, Grapples, and QuikSystem. That works well for browsing, but it buries some of the smaller hardware. So this page walks the whole catalog instead, grouped by what each thing actually does.

One thing worth understanding before you read further. We sell into two different worlds, and some products only make sense in one of them:

- **Garden tractor world.** The Little Buck and Little Bull mount to John Deere lawn and garden tractors. Their attachments bolt on or pin on, and they use the tractor's own hydraulics.
- **Skid steer quick attach (SSQA) world.** Compact tractors and skid steers already have a standard mounting plate. Several of our products speak that language instead, which is why we keep separate Kubota and Bobcat compatibility pages.

The QuikSystem is the bridge. It puts an SSQA-style plate on the end of a Little Bull's arms.

Front-end loaders

Little Buck Loader

The one we are named for, and the place most people start. It drops onto the tractor's front weight bracket and is held by two spring-loaded pins, which is why it goes on and off so easily.

Price	\$2,490
Lift capacity	340 lbs
Breakout force	450 lbs
Max lift height	5 ft 9 in
Bucket	48 in wide, 4 cu ft
Weight	around 250 lbs
Works with a cab	yes, hard or soft

It fits a long list of John Deere garden tractors: the 300 series (300, 314, 316, 317, 318, 322, 330, 332), the 400 series (400, 420, 425, 430, 445, 455) and the X series. Check our compatibility page for your exact model, because the list has gaps.

Little Bull Loader

Our heavy-lift model. Instead of hanging off the weight bracket it bolts to the tractor frame through mid-mount brackets, with support arms and turnbuckles carrying the load back. More capacity, more install work, and no room left for a cab.

Price	\$3,490
Lift capacity	440 lbs
Breakout force	550 lbs
Max lift height	5 ft 9 in
Bucket	48 in wide, 4 cu ft
Weight	350 to 450 lbs
Mounting jack	included, detachable, on rollers
Works with a cab	no

Aimed at the X700 signature series and similar heavier frames.

Little Bull QuikMount

A Little Bull with redesigned arms ending in a quick-attach plate. Buy it this way if you already know you want more than a bucket. **\$4,490.**

Everything in the QuikSystem section below hangs off this plate.

Front view	Side view
	

Z Buck

A loader for zero-turn mowers and UTVs. Zero-turns have no hydraulics to borrow, so the Z Buck runs on its own electric system. Listed at **\$3,390** and currently marked unavailable on our shop page, so give us a call before you plan around it.

The Z Buck	Demo video (click)
	

The QuikSystem

This is the newest part of our catalog. The problem it solves is boring but real: swapping a bucket for forks on a pinned loader means crawling around with a punch and a hammer, and most people only do it twice before they stop bothering.

The QuikMount plate ends that. Attachments lock on without tools, and the fitment repeats, so the thing you take off in October goes back on the same way in March.

Little Bull QuikSystem (the bundle)

Everything at once: QuikMount loader, bucket, forks, grapple and snow pusher. **\$6,990.** Buying the pieces separately comes to more, so the bundle is the better deal if you want the full set.

QuikConvert Kit

Already own a standard Little Bull? This adds the quick-attach capability without replacing the loader. **\$1,390.**

QuikBucket

Our 48-inch utility bucket, available with either an SSQA or a QuikSystem mount. **\$850.** Forty-eight inches is a deliberate choice. It is narrow enough to see past, which matters more than volume when you are grading or backing into a mulch pile.

QuikForks

Pallet forks for the quick-attach plate. **\$590.**

QuikGrapple

Brush and debris grapple, mechanical, driven by the loader's existing functions. No third hydraulic circuit needed. **\$1,590.**

QuikSnow, the 50-inch pusher

Sold as the **50" Snow Pusher, \$800**, with a choice of SSQA or QuikSystem mounting. A pusher is a box, not a blade. It carries snow forward instead of casting it sideways, which is what you want on a driveway with edges you care about. Fifty inches also fits places an eight-foot commercial pusher cannot turn around in.

Grapples

We have quietly built a second business here, and it is the engineering we are proudest of. A normal grapple needs a third hydraulic circuit, which on a small tractor means a valve, hoses, a diverter, and a bill. Ours are mechanical. We use linkage so the loader's existing curl function does the gripping.

Three models, sorted by what tractor you own.

Antler Grappler

For Little Buck and Little Bull loaders. A three-foot-wide jaw for brush, logs, limbs and general yard debris.
\$890.

The Antler Grappler

Demo video (click)

JD Talon

For John Deere compact tractors running the factory 120R loader, which covers the 1025R and 1023E. **\$1,590.** Note that this one is not for the Little Buck or Little Bull at all. It is a standalone product that fits Deere's own loader.

KBX Talon

The Kubota version, for BX series tractors from 2013 onward with SSQA quick attach. **\$1,590.** The mechanical linkage is patent pending.

Buckets, forks and blades

Replacement Bucket

A fresh 48-inch bucket for a loader whose original one has been worn thin or bent. **\$590.**

Bucket Extender / Snow Pusher

A bolt-on extension for the Little Buck bucket. It raises capacity for light bulky material and doubles as a snow pusher in winter. **\$550.**

Pallet Fork Kit

Heavy-duty forks for moving pallets, lumber and stacked material. **\$490.**

70-inch Skid Steer Boom Pole

The odd one out in our catalog, and a reminder that we are a welding shop first. A straight boom for full-size wheel and track loaders, rated to 1,100 lbs, on a standard quick attach. **\$490.** Nothing to do with garden tractors. If you have a skid steer and need to lift something long and awkward, here it is.

Ballast

Every loader manual says the same thing and every owner ignores it once. Weight on the front lifts weight off the rear, and a tractor with light rear wheels does not steer and does not stop. We sell two answers.

DIY Weight Basket

A 16 x 9 x 16 inch basket that holds six patio pavers. **\$190.** Total comes to roughly 255 lbs with the pavers in it, and the pavers cost almost nothing at any hardware store.

Weight Bar

An 18 x 3 x 12 inch bar that carries six 42-lb suitcase weights, about 262 lbs loaded. **\$120.** The better choice if you already own suitcase weights.

Handling gear and small hardware

Roll-Off Caster Kit

Casters that let a detached loader roll instead of sit. **\$490.** Take the loader off, roll it into a corner, and get your garage floor back. Anyone who has tried to shove 250 lbs of steel across concrete understands the appeal.

The caster kit

Install video (click)

Tough Man Top Plate

Welds to the top of the bucket and gives you a rated lift point, good for 350 lbs. Available with a ring or a D-ring. **\$190.**

Center Hook

A 5/16 inch heavy-duty hook for chains. **\$24.**

D-Ring

A weld-on anchor point for chains and straps. **\$35.**

Ball Hitch and Receiver

A 2 inch ball in a 1.25 inch receiver, for nudging trailers around with the loader instead of backing the tractor up to them. **\$90**, and currently sold out.

Kits for people who like to build

Little Buck Build Kit

The components of a Little Buck, minus the assembly. **\$630.** You supply the welder, the time and the nerve. It is a real discount against \$2,490, and it exists because a fair number of our customers are the kind of people who would rather build it themselves.

Loader Conversion Kit

A mounting base and hydraulic hoses for moving an existing loader from one tractor to another. **\$790.** Sell the 425, keep the loader, buy the kit for the X734. Cheaper than starting over. Call us before you order, because the fit depends on the exact year.

Merchandise

- **T-Shirt**, \$25, cotton, several colors.
- **Hoodie**, \$50, gray, men's and women's sizes.

You may also see a **Miscellaneous Parts Charge** line at \$710 in the shop. That is not a product. It is a placeholder we use to bill for custom or replacement parts once we have worked them out with you over the phone.

Full price list

Everything in one table, current 8 September 2026.

Product	Price	What it is
Little Bull QuikSystem	\$6,990	Bundle: QuikMount loader plus four attachments
Little Bull QuikMount	\$4,490	Little Bull with quick-attach plate
Little Bull Loader	\$3,490	Heavy-lift garden tractor loader
Z Buck	\$3,390	Loader for zero-turns and UTVs (unavailable)
Little Buck Loader	\$2,490	Entry garden tractor loader
JD Talon	\$1,590	Mechanical grapple, John Deere 120R loader
KBX Talon	\$1,590	Mechanical grapple, Kubota BX with SSQA
Little Bull QuikGrapple	\$1,590	Grapple for the QuikSystem plate
QuikConvert Kit	\$1,390	Adds quick attach to an existing Little Bull
Antler Grapppler	\$890	Mechanical grapple for Bucks and Bulls
QuikBucket	\$850	48 in bucket, SSQA or QuikSystem
50" Snow Pusher	\$800	Snow box, SSQA or QuikSystem
Loader Conversion Kit	\$790	Move a loader to a different tractor
Miscellaneous Parts Charge	\$710	Billing placeholder, not a product
Little Buck Build Kit	\$630	DIY component package
QuikForks	\$590	Pallet forks for the QuikSystem plate
Replacement Bucket	\$590	Fresh 48 in bucket
Bucket Extender / Snow Pusher	\$550	Bolt-on bucket extension
Pallet Fork Kit	\$490	Heavy-duty forks
Roll-Off Caster Kit	\$490	Casters for a detached loader
70" Skid Steer Boom Pole	\$490	Straight boom, 1,100 lbs, SSQA
Tough Man Top Plate	\$190	Welded lift point, 350 lbs
DIY Weight Basket	\$190	Paver ballast basket
Weight Bar	\$120	Suitcase weight ballast bar
Ball Hitch and Receiver	\$90	2 in ball, 1.25 in receiver (sold out)
Hoodie	\$50	Merchandise

Product	Price	What it is
D-Ring	\$35	Weld-on anchor point
T-Shirt	\$25	Merchandise
Center Hook	\$24	5/16 in chain hook

Things we recommend but do not make

We often recommend the **Piranha Toothbar**, a clamp-on bucket tooth bar. It is a BXpanded product, not ours, and you buy it from them. We mention it enough that people assume we sell it, so here is the correction.

What we do not make

Worth stating plainly, because the gaps tell you what kind of shop we are.

No backhoes, no three-point implements, no mowers, no tillers, no post-hole diggers, no tractors. We do not sell hydraulic parts beyond the hoses that ship with a loader or a conversion kit, so the pressure relief valve, cutoff valve and flow control valve covered in our handling guide all come from John Deere, not from us.

We build loaders, things that hang on loaders, and the weight you need on the back to use one safely. That is the whole business, and we like it that way.

Buying, shipping and contact

We sell direct. No dealer network.

Shipping

- Fastenal branch pickup: \$190, eastern US zone.
- Freight to home or business: from \$490 eastern, \$800 western.
- Canada: we quote individually.
- Pickup in Sycamore: free, and you get a factory tour out of it.

Standard lead time is one to two weeks.

Payment. Visa, MasterCard, AMEX, Discover, PayPal, Venmo, and personal checks.

Compatibility. We keep three separate compatibility pages, for John Deere, Kubota and Bobcat. Read the one for your brand before ordering. Model coverage is specific and the exceptions matter. If you are not sure, call us with your model and serial number and we will tell you straight.

About this page

Written September 2026 as a single place to see everything we make. Prices and availability change, so treat this as a snapshot rather than a quote, and check the shop page or call us for anything you are about to buy.

For how to attach, operate and maintain the loaders themselves, see the companion document, *Little Buck and Little Bull Loaders: Handling Guide*.
